

Valinda's video project 4/3/26

The data from the Go-Pro had 5 mp4 files

The test system is a raspberry pi 5. The video would not work in the Pi-0 system I tried it on.

These 5 files were copied to the folder */home/pi/trian\_video*.  
A play list was created in *vlc* and saved as *moving\_train.xspf*  
in the */home/pi/Desktop* folder.

The *autoexec.sh* was modified and contained 2 lines:

```
cd Desktop  
vlc -fullscreen --aspect-ratio=16:9 moving_train.xdpf
```
